GoMarket

The prediction markets platform built for the world's most **opinionated** audience.

Polymarket is built for the West.
The rest of the world is waiting.

- 300M+ Untapped Russian speaking users
- 400% growth in predictions markets from 2024-2025
- Polymarket: $1.4M CFTC fine, US blocked

> The gap is real. The timing is now. That's GoMarket.

The highest crypto-adoption regions on earth have no prediction market.

RU Russia

$376B in crypto received in 2024–25 — #1 in all of Europe

TR Turkey

1 in 4 people owns crypto, driven by 50%+ annual inflation

NG Nigeria

#2 globally in crypto adoption. 73% ownership rate

Asia-Pacific

37.6% of the global crypto market, fastest growing region on earth

> 97.5% of prediction market volume is controlled by US platforms. **None of this market is theirs.**

Four regions. One playbook.
Starting now.

RU

CIS — Launch

300M+ Russian speakers. We go live here first.

TR

Turkey

1 in 4 owns crypto. Inflation is 50%+. USDT is their savings account.

🌏

Asia / SEA

Vietnam, India, Philippines. 150M users. No dominant platform.

🌍

Africa

Nigeria is #2 in the world. Prediction markets just arrived there this week.

The competition didn’t lose this market. They never showed up.

No presence. No language support. No local context.

No understanding of how these users actually think, save, and trade.

We speak their language — literally.

Markets built in Russian, Turkish, Arabic. Resolution criteria tied to their news, their events, their reality.

> This isn't a gap we're trying to close. It's a market we're building from scratch — on our terms.

The opportunity is obvious.
The build is not.

Prediction markets failed globally for a decade — not because of demand, but because of three hard engineering problems nobody solved for this audience.

- Cold start liquidity
- Oracle disputes in adversarial environments
- Onboarding friction

We've spent months mapping exactly how each one breaks — and exactly how to solve it.

Here's the platform we're building.

Built around the three problems that kill platforms.

Cold Start →

Protocol-Owned Liquidity

We seed every market ourselves at launch. LMSR AMM model, $1,500–3,000 per market. KOL-anchored positions create volume signal before organic trading arrives.

Oracle Disputes →

Layered Resolution

Structured resolution criteria at market creation. Credentialed proposers with financial bonds. Expert arbitration panel for contested outcomes. Built for environments where state actors control the information.

Onboarding Friction →

Invisible Crypto

Embedded wallets. Session keys via ERC-4337. Users approve once, trade silently. No MetaMask popup on every order. Feels like a consumer app, settles on-chain.

High-conviction markets worth trading.

Will BTC surpass $120K before the next halving?

YES NO

Will a Solana ETF be approved in 2025?

YES NO

Will Russia and Ukraine sign a ceasefire by Dec 31?

YES NO

Will the Ruble weaken past 100 to the USD by Q3?

YES NO

Will the Weather in Moscow reach 28°F tomorrow?

YES NO

Will Telegram launch a native DEX in 2025?

YES NO

EVERY MARKET SCORED ON 5 DIMENSIONS BEFORE LISTING. IF IT DOESN'T CLEAR THE BAR, IT DOESN'T GO LIVE.

Three problems that kill prediction market platforms.

Cold start — no liquidity, no traders	Protocol-owned seed liquidity + KOL-anchored positions on launch
Oracle disputes — who decides what's true?	Tiered sources, credentialed proposers, expert arbitration panel
Onboarding drop-off — wallets kill conversion	Embedded wallets, session keys, gas abstraction — approve once, trade silently

Six layers. Each one a real engineering problem.

Frontend	Next.js, real-time order book, mobile-first
Backend Infra	PostgreSQL + Redis, WebSocket feeds, chain indexer
Wallet & Onboarding	Embedded wallets, ERC-4337 session keys, USDC on-ramp
Oracle System	Multisig v1 → UMA Optimistic Oracle v2
Matching Engine	Hybrid CLOB — off-chain order book, on-chain settlement
Smart Contracts	Trustless settlement — USDC collateral, YES/NO tokens, audited payouts

We know what to build and what to buy.

We build

- Matching engine
- Resolution logic
- Order signing
- Chain indexer
- Ops tooling

We outsource

- Wallets → Privy / Dynamic
- Gas → Gelato
- Contracts base → Gnosis CTF
- Oracle base → UMA
- On-ramp → Moonpay

Most teams get this backwards. Over-engineer the contracts, under-build the exchange. **We won't.**

Testnet in 16 weeks. Mainnet in 6 months.

Contracts · Matching Engine · Wallets + Oracle · Frontend · Testnet · Audit · **Mainnet**

$100K–$250K seed liquidity committed

$100K–$200K audit budget ring-fenced

Gas float for sponsored transactions

7+ Liquidity and spread providers

The foundation is built. Now we build the infrastructure.

Done

- Market design framework
- Oracle architecture
- Liquidity strategy
- 300+ KOL relationships
- Full technical specification
- Legal analysis underway

→ What's next

- MVP launch & Testing
- GTM Strategy & Rollout
- Parlay Sports System
- Oracle & News partners
- Mainnet launch

Roadmap

PHASE 1

Foundation

Q1 2026

- Core platform live
- Team and operations in place
- Market framework and product scope defined
- Liquidity and market maker partnerships secured

PHASE 2

Launch

Q2 2026

- Mainnet launch with curated opening markets
- Parlays live in time for FIFA World Cup 2026
- Referral program launched
- Liquidity staking introduced
- Community and KOL activation

PHASE 3

Growth

Q3 2026

- Expanded market categories and deeper functionality
- Token farming program launched
- Eastern Europe market entry
- Increased liquidity depth and market maker coverage

PHASE 4

Scale

Q4 2026+

- Multi-region expansion
- Decentralized oracle integration
- Community-driven market creation
- Advanced trading features and incentive programs

Team

Tural K.

Co-Founder

Crypto-native marketing strategist and ecosystem builder with hands-on experience across 20+ Web3 projects, specializing in KOL acquisition, growth campaigns, and launch execution.

Nicholas J.

Co-Founder

Crypto investor and growth operator with 7+ years in Web3. Scaled memecoins to $500M+ valuations via KOL-led growth across TRON and Sui. Built a Telegram mini-app driving user acquisition.

Zamir K.

Head of Operations

Operations leader with 12+ years building systems that scale. Led 30+ token launches, managed $200M+ portfolio, and built operational frameworks from PE to Web3.

King Advisory

Head of Marketing

Advisor and growth operator with 10+ years in marketing and corporate sales. Focused on driving revenue and closing high-value deals.

Davey K.

Andrea I.V.

We're building this. We're looking for the person who leads it.

The technical foundation is scoped. The market architecture is designed. The liquidity strategy is in place.

What we need is a CTO who owns the full build — matching engine, oracle system, smart contracts, and the infrastructure that makes it run without downtime.

This is a founding-level role. You'd be the first technical voice in every product decision from day one.

> If this is the problem you want to spend the next three years on, let's talk.

GoMarket

Building the future prediction market for the world's most opinionated audience.
